**445 12<sup>th</sup> Street, S.W.**  
**Washington, D.C. 20554**

Re: *Triennial Review of Unbundled Network Elements*, WCB Docket No. 01-338

Dear Chairman Powell:

I represent Airpath Wireless, Inc. a reseller of broadband services. It is my understanding that the Federal Communications Commission is currently reviewing its rules related to the market-opening provisions of the Telecommunications Act of 1996. In particular, I understand that the FCC is considering whether or not to continue requiring the incumbent local exchange carriers to provide access to the high-frequency portions of their loop plant so that competitors can provide ADSL services to consumers and small businesses. I write to you to emphasize how vital the FCC's linesharing rules have been to the development and deployment of broadband services. Indeed, without linesharing, there would be no competition in broadband. Competition benefits consumers by fostering innovation, higher quality services, and lower prices. The FCC must preserve its existing linesharing rules if it wants the broadband revolution to continue.

Deployment of broadband services is exploding this year, and consumers and small businesses are adopting broadband at such a rapid rate that "critical mass" – the point at which broadband adoption reaches widespread acceptance and broadband content and services are widely deployed – will soon be upon us. As the Bell companies report record DSL deployment, and as competitors like Covad continue to lead the market with lower prices and innovative new services, consumers are the winners. As you know, although ADSL technology was first developed by the phone companies, it was not deployed for fear that it would undercut their more expensive (and profitable) T-1 and ISDN services. Because of the DSL competition made possible by linesharing, the phone companies have deployed broadband in response to competitive pressure. They will only continue their broadband deployment if DSL competition via linesharing continues to provide competitive pressure. The real issue facing broadband competitors today is demand – prices need to come down even further to encourage more broadband adoption. Before the FCC adopted linesharing rules, Bell companies priced their DSL services at upwards of \$70 per month. Today, competition is forcing prices down below \$40 per month. Only if the FCC allows competitive pressure to continue – by maintaining linesharing – will the nation's broadband revolution expand as prices continue to decrease.

Airpath utilizes DSL services to help enable entrepreneurs to offer Wireless Hot Spot services throughout the U.S.

As a reseller of broadband services to the nation's consumers and small businesses, my company and the entrepreneurs that represent rely on the FCC's linesharing rules to promote competition and lower prices. In turn, Airpath Wireless, Inc. is able to fulfill your broadband vision – providing affordable, innovative broadband services to all Americans. The availability of linesharing is crucial to Airpath's ability to deploy broadband to the nation, and I urge you to continue your dedication to competition and broadband deployment, and preserve linesharing in the Triennial Review proceeding.

Thank you for the opportunity to submit this letter for your consideration. Please do not hesitate to contact me if I can provide any additional information.

Respectfully submitted,

*Todd B. Myers*
